Germany) 1962, v. 4 [no. 11] p. 418-424.

DESCRIPTORS: *Electron microscopes, *Aluminum,
Thickness, Determination, Measurement, *Surfaces,
Single crystals, Crystal structure, Deformation.

Measuring methods for the determination of the thick-
ness and average distance between the lamellae of slip
lines are discussed. In all cases the average slipper
lamella was found to be less than 1200 angstroms. A
relation is given the average lamellae thickness and
the angle between the slip plane and the surface. The
angle between the direction of the slip and the direction
of slip line is discovered. (Author)
